

1. The official flight list includes all passengers with all relevant details
2. The boarding pass includes the passenger related information
3. The ID card is used to uniquely identify the passenger
4. The video is used for a facial comparison with the ID card to reliably identify the passenger
5. The boarding pass is checked against the flight list. The validation is only completed positively if the information contained matches
6. It is checked whether the personal information on the boarding card matches that on the ID card
7. Once the identity of the passenger has been clearly established, this information is checked against the boarding card
8. The identification is positive if the personal information matches
9. Hand baggage is checked for prohibited items
10. The hand baggage check is completed. The result is positive if nothing prohibited was found
